

Research Statement

My research interest falls broadly in the intersection of Human-Computer Interaction (HCI), Computer-Supported Cooperative Work (CSCW), and Accessibility. Specifically, my doctoral research involves studying and designing for accessible collaborative content production in ability-diverse teams. My work draws on literature in HCI, CSCW, and critical disability studies to uncover how accessibility is created, negotiated, and sustained in collaborative work. Methodologically, I take a cross-disciplinary approach that includes qualitative methods (e.g., contextual interviews, observations, ethnography) as well as system design, development, and evaluation through controlled experiments and design exploration studies. As a HCI researcher, my broader goal is to support accessibility through design and thus, contribute towards reducing equity gaps in education, employment, and creative expression.
