Research Summary

My research interest sits broadly at the intersection of Human-Computer Interaction (HCI), Computer-Supported Cooperative Work (CSCW), and Accessible Computing, with a focus on studying and designing for accessible collaborative content production in ability-diverse teams, i.e., teams involving people with and without disabilities. Methodologically, I take a human-centered, multi-stage approach that involves qualitative studies (e.g., contextual interviews and ethnographic field observations) followed by the design, development, and evaluation of new systems through exploratory and mixed-methods experimental analyses. As a first-generation scholar and woman of color from the Global South, my broader goal is to enhance accessibility and inclusion through computing and contribute towards reducing equity gaps in education, employment, and creative work.
